

## Zscaler & Ipanema Solution

Safely embrace your strategic IT transformations including SaaS, Cloud computing & Social Media

**(RE)DISCOVER SIMPLICITY™**

TO GUARANTEE APPLICATION PERFORMANCE OVER YOUR WAN

In today's increasingly mobile and connected world, IT departments are experiencing change like never before. Companies are tapping into the benefits brought by personalized devices, SaaS applications, private and public clouds, social media and virtual desktops. This extends requirements for combining traditional MPLS networks with Internet accesses.

Enterprises are essentially left with limited options to connect their end users to Internet. Local internet breakouts provide direct access to the Internet and public cloud applications offering the best possible experience to remote users. However it brings its own challenges with application performance and distributed security at the branch.

Ipanema's **Dynamic Hybrid Networking** solution combined with **Zscaler Security** as a Service platform solves the challenges of local Internet breakout. Together they enable companies to enjoy unprecedented **application performance over hybrid networks** (MPLS, Intranet and Internet) and uncompromising **security** along with significant network cost savings.

The joint solution will enable enterprises to benefit from secure, automatic, optimized hybrid networking, which combines Multiprotocol Label Switching (MPLS) infrastructure for wide area network traffic with local, secure and direct employee access to the Internet – eliminating the need for expensive traffic backhauling.

Through this partnership, organisations looking to roll out hybrid networks to take advantage of consumer, public and private cloud computing will no longer need to deploy expensive security appliances to protect their employees and will be able to dynamically select the best path in order to guarantee business applications performance. The partnership is also expected to greatly **reduce wide area networking costs** for joint customers, as Internet-bound traffic no longer has to be backhauled from regional or branch offices to corporate headquarters.

## Benefits of Zscaler and Ipanema solution:

The combined approach of dynamic **Application Performance Guarantee** over hybrid networking from Ipanema and Zscaler's Security as a Service platform allows enterprises to:

- Deploy **unified, dynamic and inline security** that can inspect all employee traffic to and from the Internet
- Provide **Advanced Persistent Threat (APT) protection** that blocks the most dangerous threats before they reach company networks

- Guarantee key **business application performance** over hybrid networking by dynamically selecting the best network path using real-time measurement of traffic conditions, availability and application characteristics.
- Use **Internet backup links** to offload non-critical applications
- Deliver **complete visibility** on application usage and performance over the hybrid network.

## Solution Deployment at the Branch office:

## About Zscaler

Zscaler is transforming enterprise networking and security with the world's largest Direct-to-Cloud Network, which securely enables the productivity benefits of cloud, mobile and social technologies without the cost and complexity of traditional on-premise appliances and software. The Zscaler Direct-to-Cloud Network processes daily more than 12 billion transactions from more than 12 million users in 180 countries across 100 global data centers with near-zero latency. Learn why more than 4,500 global enterprises choose Zscaler to enable end-user productivity, enforce security policy and streamline WAN performance. Visit us at [www.zscaler.com](http://www.zscaler.com).

### About Ipanema Technologies

Enterprises' Digitalization accelerates. In a world that moves at web speed, IT departments have more and more difficulties to manage the complexity of their information system.

Unified Communications, cloud computing, SaaS, BYOD, social media, VDI, Retail 2.0 are just a few examples of IT trends that strongly increase IT complexity.

In this case, how can you regain control and align IT with strategic corporate objectives? How can you manage more demands and usages with the same network resources to stabilize telecom costs?

**With Ipanema, (Re)discover Simplicity to guarantee your application performance.**
