

In just 1 month of using the solution in the orthopedic admission unit, we achieved an ROI of 1100%, with over 2,000 orders managed, reaching an incredible satisfaction score of 4.95 out of a total of 5.0"

Director of the Hospital Unit and Care Practices

HOOBX Neonpass Room

Optimizing the Patient Experience and Hospital care

Neonpass Room, a HOOBX innovation, addresses hospital care inefficiencies. Many patient requests don't require nursing involvement, such as requests for water or extra pillows. With Neonpass, patients move beyond traditional nurse call buttons, communicating their needs seamlessly through mobile devices, mirroring the convenience they experience with ride and food delivery apps outside the hospital. The HOOBX AI system, powered by Intel® Xeon processors and optimized with Intel Distribution of OpenVINO™ toolkit, seamlessly routes the requests to the appropriate department. When nursing intervention is needed, the AI assesses and prioritizes requests that indicate pain or emotional distress, promptly sending staff alerts. By integrating the solution, HOOBX hospitals have seen a reduction in nursing workload, a higher NPS, and an impressive ROI.

Key Features

			
Reduction In Nursing Workload	Real-time Request Patient Monitoring	AI Detection And Prioritization Of Emergency Situations	Enhancing Patient NPS
