The retail industry is leveraging technology to enhance customer experiences and operational efficiency. E-commerce has transformed product sales, and now physical stores are experiencing similar changes. Supermicro™ offers a range of enterprise edge products designed for retail, featuring various form factors for different deployment scenarios.

Supermicro™ collaborates with Intel to integrate the latest innovations and architectures, ensuring reliability and alignment with market needs.
Recognizing the unique demands of retail environments, Supermicro™ provides solutions for diverse use cases, including systems with wide temperature ranges and multiple mounting options.

As a Titanium Partner with Intel®, they deliver cutting-edge products featuring the latest Atom®, Core® Ultra™, and Xeon®, processors, enabling efficient edge applications.
Reliability is crucial in retail, where staff need to focus on their tasks without hardware issues. Supermicro's™ solutions minimize the need for technical support, reducing operational costs. Additionally, Supermicro™ offers a broad network of ecosystem partners to provide comprehensive solutions, from traditional computing to AI-enabled applications like loss prevention using Intel's® OpenVino™ architecture.
